

# DRAPERY Stack

## THINGS TO KNOW

Stack back is knowing how many inches a drapery is going to take up when it is completely opened or 'stacked back' to the furthest extent the hardware rod will allow.

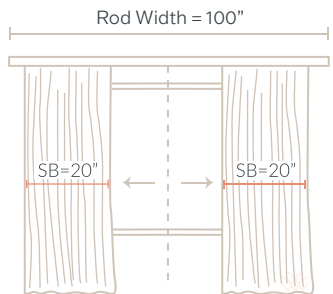

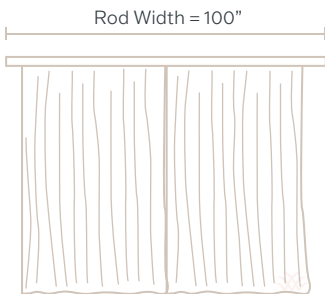

## THE VARIABLES

Stack Back width depends on whether the drape is a one-way draw or center open and what the overall rod width is. Once you have these two key bits of information, solve via a simple formula:

### CENTER OPEN

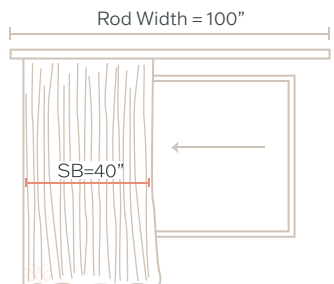

Rod Width  $\div$  5 = Stack Back Per Side

$$100 \div 5 = 20''$$

### ONE WAY DRAW

Rod Width  $\div$  2.5 = Stack

$$100 \div 2.5 = 40''$$
