

THREADWELL

CARE & CLEANING

Top Treatment

Cornice or Valance

Cornice box treatments generally collect the most debris along the top surface. This can be cleaned by lightly dusting or vacuuming off the top treatment with a clean white cloth.

To clean the face and sides, a light vacuuming with a soft brush vacuum attachment is an acceptable method of regular maintenance.

For deep cleaning, a professional upholstery steamer may be used to clean the cornice. Avoid harsh and/or abrasive chemicals and always spot test in a small inconspicuous area to ensure compatibility with the fabrics and materials involved.

Fabric-Wrapped Fascia or Cornice

These only need light maintenance to stay dust and dirt free. Clean in place. Fascia fabric can be periodically dusted using a feather duster or vacuum with a soft brush attachment.

For deep cleaning, contact a professional steamer or on-site dry cleaning service.

Decorative Metal Drapery Rods

To clean the rods, wipe them with a damp cloth.
