

BED Measuring

THINGS TO KNOW

The following procedure should be used when verifying bed sizes. To ensure accuracy when measuring, it is important to start at the edge of box spring before the curve or bend. If cord or tape edge is provided, please take measurements at that location. These measurements are necessary in determining the exact width, length and height of the bed set.

NOTE: when determining the finished size for the boxspring we will deduct 1/2" from all measurements provided to ensure a tight fit.

Bed size (king, queen, etc): _____

Dimension A (boxspring width): _____

Dimension B (boxspring length): _____

Dimension C (mattress top to floor): _____

Dimension D (boxspring top to floor): _____

Dimension E (boxspring height): _____
