

# DRAPERY Deducts

## THINGS TO KNOW

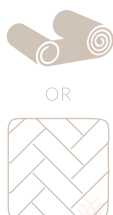

The following doesn't account for every unique condition possible but does a good job of prompting questions and conversations between manufacturer, installer and property.

**DUST CAP OR 1" x 2"':** An additional 0.25" - 0.75" allowance may be needed to account for the top treatment's dust cap/roof board. Construction styles and materials vary greatly, so please be sure to confirm thickness and style prior to finalizing deduction here.

**RIPPLEFOLD OR PLEATED:** Ripplefold draperies traverse below the hardware, requiring a 1.0" allowance for ceiling mounted 94004 track; while pinch pleated draperies hang only 0.25" below the ceiling with 94004 track. Please note: decorative hardware, 94003 track and wall-mount hardware all require variations based on application.

**CARPET OR SOLID SURFACE:** Assuming finished floor was not in place during measure, an additional allowance will be required. As flooring materials have increased in variability, a standard 0.25" carpet pad and 0.50" carpet deduction can no longer be assumed. LVT/VCT Flooring is also used oftentimes, with varying thickness. Be sure to confirm finished flooring allowances every time.

**ABOVE FINISHED FLOOR:** Standard clearance above the finished floor is 0.50", however there are times where design may dictate higher (0.75" - 1.5" above floor) or lower (skimming/puddling the floor). All treatments are subject to a 0.25" allowance during manufacturing, therefore, we are unable to commit to tolerances tighter than 0.50" AFF without customer accepting that treatments may also skim the floor.

**NOTES, EXCEPTIONS & ASTERISKS:** Any treatment above 120" height should be evaluated for an increased deduction, due to weight and height. Fabric utilizing an open/loose construction should be considered for an additional deduction (0.25" - 1.0"). New construction floors are often floated (post concrete/prefinished flooring) to level the room requiring an additional allowance.
