MOTORIZED & ADA

# Motorized

## THINGS TO KNOW

### SYSTEMS

**BATTERY:** A motor may draw its power from a low-voltage battery pack, that can either be mounted at the end of the hardware, inside a roller tube, or hidden within a pocket.

**PLUG-N-PLAY:** This motorized system uses a traditional 3-prong plug to draw power from a wall outlet. A small step-down transformer is included in the system's electrical connection.

**HARDWIRED:** Motorized with an 110V line voltage power source. This option can accommodate the largest of treatments. Requires a certified electrician to complete installation.

### CONTROLS

**HANDHELD:** Battery-operated remote which interfaces with the roller shade via radio frequency. This is best used for treatments that should only be controlled by hotel staff.

**WIRELESS WALL SWITCH:** Installed with a switch plate flushed to the wall, this battery-operated remote can be placed anywhere in the room for easy guest access.

**HARDWIRED SWITCH:** This switch interfaces with the motor via direct wiring. The hardwired motor is wired to a junction box and the switch is also wired directly to the junction box. Requires a certified electrician to complete installation.
