

PILLOW

Basic Components

GLOSSARY

KNIFE EDGE: The most common form of pillow edge— 2 pieces of fabric sewn together at the edges to form a sharp seam and tapered corners. They tend to be fuller in the middle and have thinner edges. Pillows finished this way offer a clean design with no added ornamentation.

BAND: A piece of fabric sewn on top of the face fabric on any desired location. May be constructed from a contrasting fabric or sometimes a pre-made trim.

CORD/WELT: A design aspect that runs along the seams of a pillow to add strength and decoration. Cords may be purchased in prefinished designs and sewn onto a pillow, while welts are 100% polyester white cords wrapped in a fabric of choice. Cord and welt are available in different diameters.

FLANGE: A flat band of fabric sewn along the edge of a pillow as an added design aspect. May be constructed from the same fabric as the face or from a contrasting fabric.

ZIPPER: Our zippers are made from 100% nylon, available in tan, black, ivory, brown, or white and can be cut to any length. All zippered pillows are made with a hidden closure for a functional design allowing for the removal of inserts.
